APPENDIX: NOTES

1. The Company utilizes non-GAAP (or “adjusted”) financial measures as the measures provide additional information to assist investors in understanding and assessing the Company’s and our business segments’ ongoing performance and financial results, as well as assessing our prospects for future performance. The adjusted financial measures facilitate a meaningful analysis and allow more accurate comparisons of our ongoing business operations because they exclude items that may not be indicative of or are unrelated to the Company’s and our business segments’ core operating performance, and are better measures for assessing trends in our underlying businesses. These adjustments are consistent with how management views our businesses. Management uses non-GAAP financial measures in making financial, operational and planning decisions and evaluating the Company’s and our business segment’s ongoing performance.

Adjusted earnings (loss) eliminates the effects of mark-to-market adjustments which primarily reflects unrealized gains or losses based on the changes in fair value measurements of MSRs and their related financial liabilities for which a fair value accounting election was made. These adjustments which can be highly volatile and material due to changes in credit markets, are not necessarily reflective of the gains and losses that will ultimately be realized by the Company. Adjusted earnings (loss) also eliminates, as applicable, restructuring costs, rebranding and integration costs, gain (losses) on sales of fixed assets, certain legal settlement costs that are not considered normal operational matters, and other adjustments based on facts and circumstances that would provide investors a supplemental means for evaluating the Company’s core operating performance.

2. Q1’17 adjustments principally include severance and transition costs related to transferring customer functions on-shore.
3. The identified opportunities are not currently serviced or sub-serviced by the Company and there can be no assurance that these potential transactions will ultimately be consummated, or will remain the same size. Transactions noted may still be subject to regulatory approvals and final closing conditions which could impact the ultimate amounts boarded as well as timing. In addition, actual boarded amounts may differ due principally to portfolio amortization between when a portfolio is awarded versus actual boarding.
4. Includes MSR owned and originations.
5. Q4’16 adjustments principally include the elimination of the Greenlight trade name. Q1’17 adjustments include severance related to right-sizing operations for Q2’17 anticipated volumes and a non-recurring reconciliation of certain refinance fees charged from 2012 and 2013.
6. Based on a percentage of pull through adjusted lock volume.
7. Q4’16 adjustments include non-recurring items principally related to severance and technology write-offs partially offset by investor recovery related to a previously disclosed title and close settlement.
8. Calculated in accordance with FNMA capital standards. Liquidity includes cash and cash equivalents.
9. Estimates of future profitability and illustrative economic value are forward looking and based on a number of factors outside our control. Results could differ materially.
10. Calculated using fully diluted average share count.
11. Some valuation based on previously disclosed valuation estimate. Recapture value based upon 30% recapture rate and is excluded from MSR valuation for GAAP purposes. Subservicing valuation based on estimated future profitability under terms of existing agreements for UPB as of March 31, 2017. Corporate overhead valuation assumes 5 year expense at 10% discount rate.
